| **Service** | Endocrinology |

## Reason for consultation

Type 2 diabetes with hyperglycemia following an emergency department visit on 6/22/2026.

## Interval history

Started insulin glargine 10 units nightly in the ED and empagliflozin 10 mg daily on 7/1. Home fasting glucose 150-190 mg/dL over the last week. No symptomatic hypoglycemia. Diet and activity reviewed.

## Examination

Weight 101.6 kg. Blood pressure 136/84 mmHg. Feet: intact monofilament sensation, no ulcers.

## Assessment

Type 2 diabetes mellitus with hyperglycemia; HbA1c 10.4% on 6/22/2026. Renal function preserved (creatinine 1.0 mg/dL, eGFR 85).

## Recommendations

1. Increase insulin glargine from 10 to 14 units nightly.
2. Continue metformin 1000 mg twice daily and empagliflozin 10 mg daily.
3. Repeat HbA1c in approximately 3 months.
4. Referral for diabetic eye examination.
5. Return to endocrinology in 3 months.

## Vital signs at visit

Heart rate 80 bpm; Systolic blood pressure 136 mmHg; Diastolic blood pressure 84 mmHg; Body weight 101.6 kg
