Cardiology Consultation

Date	8/28/2026 17:00 UTC
Author	Dr. Priya Raman, MD — Cardiology
Service	Cardiology

Reason for consultation

Intermittent palpitations in a patient with newly diagnosed hypertension.

History

Palpitations lasting seconds, several times weekly, since spring 2026. No syncope, chest pain or dyspnea. Antihypertensives: amlodipine 10 mg daily; lisinopril-hydrochlorothiazide 20/12.5 mg daily started 8/19/2026.

Examination and ECG

Blood pressure 144/88 mmHg, heart rate 72 bpm. ECG: sinus rhythm, rate 72, normal intervals as documented.

Assessment

Palpitations with sinus rhythm on resting ECG. Hypertension under active titration.

Plan

1. Transthoracic echocardiogram ordered.
2. Ambulatory rhythm monitoring offered.
3. Continue blood-pressure management with primary care.

Vital signs at visit

Heart rate 72 bpm; Systolic blood pressure 144 mmHg; Diastolic blood pressure 88 mmHg
