Nephrology Consultation

Date	8/12/2026 18:00 UTC
Author	Dr. Luis Moreno, MD — Nephrology
Service	Nephrology

Reason for consultation

Chronic kidney disease stage 3a with albuminuria.

History

Hypertension. Regular ibuprofen use until 6/3/2026. Losartan started 6/3 and increased to 50 mg on 7/8/2026.

Data reviewed

Creatinine 1.24 mg/dL (eGFR 51) on 6/3 and 1.30 mg/dL (eGFR 48) on 7/8/2026. Urine albumin/creatinine 120 mg/g then 96 mg/g. Potassium 4.9-5.0 mmol/L.

Assessment

CKD stage 3a (G3a/A2), likely hypertensive with contribution from prior NSAID use per assessment.

Recommendations

1. Renal ultrasound.
2. Continue losartan 50 mg daily; avoid NSAIDs.
3. Basic metabolic panel and urine albumin/creatinine in 6 weeks.
4. Return to nephrology in 3 months.

Vital signs at visit

Heart rate 72 bpm; Systolic blood pressure 132 mmHg; Diastolic blood pressure 80 mmHg
